NANYANG POLYTECHNIC – SCHOOL OF DESIGN

We encourage students to develop a curious mind and an active attitude in seeking knowledge towards creativity and instil confidence in articulating their percept and concept. Through reciprocal hands-on design experimentations with thinking and investigations, students translate their design intentions into physical manifestations.

Taught by faculty from School of Design and the School of Engineering, the Sustainable Architectural Design course will develop a new breed of future-ready architectural designers and technologists who can meet the growing demand for multi-disciplinary applications in the built environment.
